

The Spring Topology and Dynamics Conference 2009, March 7–9, 2009, University of Florida, Gainesville, FL, USA

**SEPARABLE CONTINUA WHOSE HYPERSPACE OF  
SUBCONTINUA IS NOT SEPARABLE.**

MICHEL SMITH

We consider some applications of continua theory to set theoretic topology. Some examples of metrization theorems are given. A technique is discussed that will generate examples of separable non-metric continua whose hyperspace of subcontinua are not separable.
